Mylan’s Epinephrine Auto-Injectors

Important Facts Related to the EpiPen® (epinephrine injection, USP) Auto-Injector Discussion
The points that follow outline important facts related to Mylan, EpiPen® Auto-Injector and our mission of providing the world with access to high quality medicine. Additional detail and other resources are located on Mylan.com/EpiPenAccess.

• Mylan’s success since its founding in 1961 has been built on three principles: producing high quality medicine, significantly expanding access to those medicines, and helping to lower healthcare costs.

• While EpiPen® currently is dominating news about our company, Mylan is much more than one product. Globally, we have more than 2,700 products in our portfolio. In the U.S. alone, we offer 635 products, representing 21 billion doses. Our average price per dose for all prescriptions sold in the U.S., including EpiPen®, is about 25 cents.

• Over the last decade, Mylan’s products reduced total health expenses in the U.S. by about $180 billion.

• While Mylan is much more than any one product, all of our products are important, including EpiPen® Auto-Injector. Since we purchased the EpiPen® product in 2007, we’ve invested significantly to enhance the product and make it more widely available.
  – The epinephrine auto-injector we market today is very different than the one we acquired. For example, our “next-generation” EpiPen®, launched in 2009, offered multiple new features, including a Never-See-Needle® to help protect against needle exposure, before and after use.
  – We are working on a formulation with a longer shelf life to extend the period between refills. This product is currently under review by FDA.
  – We’ve advocated for schools to have access to epinephrine auto-injectors without a prescription for a specific child, and 48 U.S. states now have that access. We’ve also donated more than 700,000 free EpiPen® Auto-Injectors to more than 66,000 schools (more than half of all public schools in the U.S.).

• There is a false impression out there that Mylan receives more than $600 for an EpiPen 2-Pak®. This is not the case, and we’re working hard to set the record straight. Of the $608 list price for each 2-Pak, Mylan receives in revenue, on average, $274 after rebates and fees paid to third parties. This amount is further reduced by the cost of goods ($69 per 2-Pak) and other expenses Mylan incurs for sales, marketing, regulatory compliance, and patient and school access programs.

• Mylan’s profit comes to about $100 per two-pack or $50 per EpiPen® Auto-Injector. After we launch the generic version, this will be further reduced. The profit we earn on EpiPen® Auto-Injector – and that from other products – is used to fund R&D and facility investments globally. We have committed to invest $1.2 billion for R&D and facilities this year alone.

• As concerns developed, we took action to help ensure that everyone who needs an EpiPen® Auto-Injector is able to get one at the lowest possible price.
  – We offer the first authorized generic for EpiPen® Auto-Injector, effectively cutting the price in half from $608 to $300.
  – We are educating pharmacists and healthcare professionals so they can help patients select the option that provides the best, most affordable access.
  – We also increased our My EpiPen Savings Card® program benefit from $100 to $300 and doubled the income eligibility threshold of our Patient Assistance Program to $97,200 for a family of four.

• Because it’s in our DNA, we are going to do whatever we can to help address the issues that led to these pricing controversies. We understand and accept that Mylan and EpiPen® Auto-Injector are the focus today. But the pricing puzzle frustrating everyone in the U.S., goes far beyond EpiPen® Auto-Injector and Mylan.

Indications
EpiPen® (epinephrine injection, USP) 0.3 mg and EpiPen Jr® (epinephrine injection, USP) 0.15 mg Auto-Injectors are for the emergency treatment of life-threatening allergic reactions (anaphylaxis) caused by allergens, exercise, or unknown triggers; and for people who are at increased risk for these reactions. EpiPen® and EpiPen Jr® are intended for immediate administration as emergency supportive therapy only. Seek immediate emergency medical help right away.

Important Safety Information
Use EpiPen® or EpiPen Jr® Auto-Injectors right away when you have an allergic emergency (anaphylaxis). Get emergency medical help right away. You may need further medical attention.
Please see additional Important Safety Information on next page.
Important Safety Information, continued

Only a healthcare professional should give additional doses of epinephrine if you need more than two injections for a single anaphylactic episode. EpiPen® or EpiPen Jr® should only be injected into the middle of your outer thigh (upper leg), through clothing if necessary. Do not inject into your veins, buttocks, fingers, toes, hands or feet. Hold the leg of young children firmly in place before and during injection to prevent injuries. In case of accidental injection, please seek immediate medical treatment.

Rarely, patients who have used EpiPen® or EpiPen Jr® may develop an infection at the injection site within a few days. Some of these infections can be serious. Call your healthcare professional right away if you have any of the following at an injection site: redness that does not go away, swelling, tenderness, or the area feels warm to the touch.

Tell your healthcare professional about all of your medical conditions, especially if you have asthma, a history of depression, thyroid problems, Parkinson’s disease, diabetes, high blood pressure or heart problems, have any other medical conditions, are pregnant or plan to become pregnant, or are breastfeeding or plan to breastfeed. Be sure to also tell your healthcare professional all the medicines you take, especially medicines for asthma. If you have certain medical conditions, or take certain medicines, your condition may get worse or you may have longer lasting side effects when you use EpiPen® or EpiPen Jr.®

Common side effects include fast, irregular or “pounding” heartbeat, sweating, nausea or vomiting, breathing problems, paleness, dizziness, weakness, shakiness, headache, feelings of over excitement, nervousness or anxiety. These side effects usually go away quickly if you lie down and rest. Tell your healthcare professional if you have any side effect that bothers you or that does not go away.
